

INSTRUCTIONS

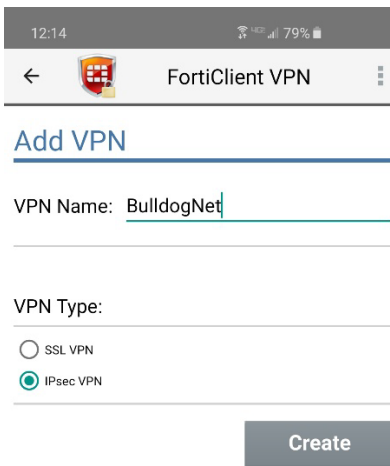

BulldogNet VPN Android connection

Notes

Use the instructions below to set up BulldogNet VPN access on your Android device. You must receive permission from Jonah to be able to use our VPN service. If you do not request permission, your account will not have VPN access rights. **DISCONNECT YOUR DEVICE WHEN YOU NO LONGER NEED REMOTE ACCESS.**

Steps

1. Open Google Play and download the FortiClient VPN app
2. After the app installs, open it. If the screen below doesn't show when you open the app, tap "New VPN"

3. Fill out the fields on the new VPN screen as directed below
 - a. VPN Name: BulldogNet
 - b. VPN Type: IPSec VPN
4. Tap "Create"
5. On the next screen, tap the "Server settings" section
6. Fill out the fields as directed below
 - a. FortiGate server address: bnvpn.paynesville.k12.mn.us
 - b. Authorization method: Pre-shared key
 - c. Pre-shared key: #741vpn
7. Go back a page and tap on the IPSec XAuth settings
8. Enter your BulldogNet username (not email address) by tapping the "Username" option and tap "OK"
9. Go back a page and tap the "Connect" button
10. Enter your BulldogNet password
11. After you are connected, it will show a current session timer
12. Disconnect after you are done with your session

To connect again, open the app, tap the "Connect" button, enter your BulldogNet password and login. You will be connected.
