

INSTRUCTIONS

BulldogNet VPN Mac connection

Notes

Use the instructions below to set up BulldogNet VPN access on your Mac device. You must receive permission from Jonah to be able to use our VPN service. If you do not request permission, your account will not have VPN access rights. **DISCONNECT YOUR DEVICE WHEN YOU NO LONGER NEED REMOTE ACCESS.**

Steps

1. Download the Fortinet client for your operating system located at www.forticlient.com/downloads
2. Once the installer downloads, launch it
3. The FortiClient installer will download the application. When done, click "Install" to install it
4. Click "Continue" twice to proceed
5. Agree to the terms and click "Next" twice
6. Click "Close" to complete the install when prompted
7. Find FortiClient in your Applications and launch it
8. After the application opens, click "Remote Access" in the sidebar, click the cog next to the dropdown box and then click "Add a new connection"
9. Change the radio button at the top of the window to "IPsec VPN" and fill out the fields as directed below, then click "Add"
 - a. Connection Name: BulldogNet
 - b. Description: Leave empty
 - c. Remote Gateway: bnvpn.paynesville.k12.mn.us
 - d. Authentication Method dropdown: Leave on "Pre-shared key"
 - e. Pre-Shared Key: #741vpn
 - f. Authentication (XAuth):
Leave checked
 - g. Username: Enter your BulldogNet username
10. To connect, open FortiClient, select "Remote Access", BulldogNet, enter your credentials and then click "Connect"
